QUICK AND RELIABLE RUGGED SOLUTIONS FOR LAPTOP SYSTEMS

Smartronix' Night Vision Imaging System (NVIS) solution for laptop computers uses plastic material that provides both mechanical durability and flexibility. Our clip-on solution makes it ideal for a quick and reliable night-vision retrofit to any laptop LCD screen.

- ▶ Highly durable and shock resistant
- ▶ Cost effective alternative to modifying laptop screen
- ▶ Can fit virtually any display size and shape
- ▶ Clip design quickly converts laptop for night time operations
- ▶ Laptop screen can be closed with filter in place or can be secured to outside of laptop when not in use
- ▶ Specifically designed to prevent unfiltered light leaks around edges of display

CLIP

NOT IN USE

FILTER

APPLICATIONS

Ground Mobile – Designed to keep laptop displays visually covert in ground mobile operations. This filter's visible transmission is very low (<1%) which makes the laptop display virtually undetectable at a distance but still readable to the user's scotopic (night adjusted) eye.

Aviation - This filter's visible transmission is 29% and when installed, keeps the laptop display from interfering with NVIS equipment while keeping the display readable with the unaided eye.

**Note - NVIS Filter shown includes optional laptop. Images are not to scale.*
